Dear Madam / Sir

Maintaining the Renewable Energy Target (RET) Scheme

Having been involved in the solar PV industry in Australia for more than 20 years, we know that building a robust renewable energy industry requires solid financial investment, and for this investment to occur, a high level of certainty is paramount.

The RET Scheme provides a good framework for investment in the growing clean energy sector which is important for the environment, while at the same time employing and creating thousands of jobs.

We strongly urge the Climate Change Authority to maintain the RET Scheme in its current form to provide the necessary investor confidence and certainty in this sector.

Yours sincerely

Gavin Street and Mike Schach
